Abstract

The RIC Nexus (Russia-India-China) proposes a transformative economic ecosystem that integrates the strengths of Russia, India, and China to create a self-reliant, circular economy. By leveraging blockchain technology, renewable energy, and strategic resource pooling, the initiative aims to bypass U.S. tariffs, foster innovation, and generate over 10 million jobs across Asia and Russia. Key mechanisms include blockchain-driven supply chains, a renewable energy and critical minerals grid, agro-industrial smart zones, and an Arctic-Asia digital corridor. With geopolitical safeguards and a focus on sustainability, the RIC Nexus positions the Asia-Russia axis as a leader in the Fourth Industrial Revolution, offering a scalable model for other nations to join.

Title
The Sovereign Fulcrum: India's Doctrinal Metamorphosis in an Age of Asymmetric Contestation and Geostrategic Flux 440

Abstract
This inquiry dissects India's transformative security posture, characterized by decisive kinetic interventions, autonomous technological architecture, and sophisticated perception management. Illustrated by pivotal actions like "Vajra Prahar" (hypothetical replacement for Sindoor) and broader geostrategic initiatives such as "Jal Vyuh" (hypothetical replacement for Teesta), New Delhi's emergent doctrine signifies a profound evolution from its historical stance of strategic forbearance. The analysis elucidates India's employment of natively engineered systems, influence operations, and calculated force projection to navigate pressures from entities like Pakistan, contend with ideological projections from powers such as Turkey, and counterbalance ambitious states like China. The outcomes point towards a reconfigured Indian strategic persona: self-assured, proactive, and adept at synergizing military, diplomatic, and informational levers to sculpt the regional power dynamics.

Title
Foreign Funding and Enhanced National Security : A Data-Driven Analysis of FCRA Reforms (2019-2025) under the Union Home Ministry Mr Amit Shah's Tenure 455

Abstract
This study undertakes a data-driven analysis of the Foreign Contribution Regulation Act (FCRA) reforms implemented under the leadership of Union Home Minister Amit Shah since 2019. Focusing on national security imperatives and the need to ensure transparent utilization of foreign contributions by Non-Governmental Organizations (NGOs), the Ministry of Home Affairs has introduced significant legislative and administrative measures. Utilizing longitudinal data on Annual Returns (AR) filed by FCRA-registered associations from 2006-2007 to 2024-2025, sourced from the Ministry of Home Affairs, this paper examines the quantifiable impact of these initiatives. The findings reveal a pronounced reduction in AR filings, particularly post-2019, culminating in a 99.5% decrease by 2024-2025 from the 2018-2019 figures. This correlates with strategic cancellations of non-compliant registrations and heightened enforcement. The analysis concludes that these reforms have substantially strengthened India's regulatory framework for foreign contributions, enhanced compliance, and fortified national security by mitigating potential misuse of funds.

Title
Resilient by Design: Ethical Lessons from Conflict Zones for Sustainable Employment 429

Abstract
Organizations in post-conflict or underserved regions grapple with chronic unemployment, deficient infrastructure, and eroded institutional trust. Conversely, non-state armed groups (NSAGs) like the Taliban, ISIS, and Hezbollah exhibit striking efficacy in resource mobilization under comparable adversity. This paper investigates adapting their operational strategies—stripped of unethical elements—through an ethical lens to foster sustainable employment. Analyzing militant groups' recruitment, logistics, governance, and training reveals adaptable tactics for community-centric workforce development. This research proposes a novel synthesis of resilience studies, peacebuilding, and labor economics, applying ethical innovation.

Title

Strategic Continuity: Ancient Indian Wisdom and Contemporary Military Praxis – An Exposition of Operation Sindoos

435

Abstract

This exposition examines the enduring strategic resonance of ancient Indian wisdom within the framework of modern military praxis, with a focus on Operation Sindoos—a meticulously calibrated military response to transnational terrorism. Drawing from foundational civilizational texts such as the Bhagavad Gita, Ramayana, Mahabharata, Rigveda, Atharvaveda, Manusmriti, and Kautilya's Arthashastra, the study explores how India's classical doctrines of ethical warfare (dharma yuddha), hybrid strategy, and rhetorical statecraft have been purposefully integrated into a contemporary operational theater. Far from being a symbolic reference, this synthesis translates metaphysical, ethical, and political principles into actionable doctrine. Operation Sindoos is thus not merely a tactical or geopolitical maneuver but a civilizationally-anchored innovation—a novel strategic model that harmonizes śāstra (sacred knowledge) with śakti (sovereign capability). This integrated paradigm sets a new global precedent by demonstrating that ancient cultural intelligence can be operationalized to meet the complex demands of 21st-century security dynamics.

Title

The Shadow Doctrine: Guns, Dams, and Diplomacy in Asymmetric Conflict

399

Abstract

Contemporary statecraft increasingly utilizes asymmetric, hybrid methods over conventional warfare. Nations employ non-attributable instruments—from proxy kinetic operations to resource leverage—to pursue geopolitical aims without overt conflict. This paper posits India's development of a "Shadow Doctrine" in response to Pakistan's persistent asymmetric threats. We analyze this through a tripartite framework: 1) Deniable Kinetic Retaliation ("unknown gunmen" phenomenon), 2) Hydro-Strategic Coercion (recalibrating Indus Waters Treaty utilization), and 3) Diplomatic Isolation (amplifying regional pressures). Examining events like targeted killings within Pakistan, shifts in India's IWT stance, and evolving regional alignments (e.g., Afghanistan's posture), we argue India is formulating a silent, multi-domain strategy to reshape regional power dynamics while circumventing traditional warfare. The analysis critically assesses implications for Sino-Pakistani interests (CPEC), Pakistan's internal stability, and broader South Asian security architecture.

Title

Addressing Anomalies in Defining Plagiarized Content: A Framework for Fair Attribution in Cultural Embedding

484

Abstract

Plagiarism is conventionally defined as the unauthorized use or close imitation of another's work, yet this definition frequently fails to account for culturally embedded phrases and widely recognized expressions. This paper investigates the anomalies inherent in defining plagiarized content, with a particular focus on instances where phrases such as "I have a dream," "To be or not to be," and "Survival of the fittest" transcend their origins to become integral components of a shared cultural lexicon. This is the world's first unique concept introduced to address how rigid plagiarism frameworks unfairly penalize the reuse of culturally embedded language. Based on an analysis of these anomalies, this study proposes a practical framework that effectively balances fair attribution with the acknowledgment of cultural evolution. The proposed solutions aim to mitigate disparities in plagiarism detection and foster equitable intellectual property practices across academic, creative, and legal domains.

Title

HELIX: India's Neural-Powered Predictive Security Framework to Combat Crime, Terrorism, and Exploitation

382

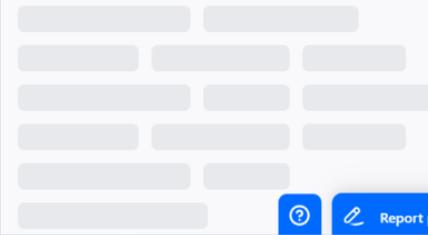

Abstract

The relentless march of technology unveils bold pathways to conquer enduring societal plagues like crime, terrorism, and exploitation. Inspired by Elon Musk's neural monitoring explorations and biometric frontiers, HELIX emerges as a visionary national security paradigm crafted to thwart nefarious activities before they ignite. This framework fuses avant-garde tools—neuro-ID surveillance, DNA-Aadhaar fusion identification, AI-driven behavioral tracking, and predictive analytics—into a formidable shield targeting high-risk individuals, undocumented migrants linked to illicit networks, and exploitative syndicates. Through real-time neural impulse pattern detection, geo-fencing, and citizen reporting applications, HELIX aspires to dramatically curtail crime, amplify security force precision, and restore public faith in law enforcement. This trailblazing approach redefines internal security, melding science, vigilance, and justice into a singular fortress against modern threats.

Title

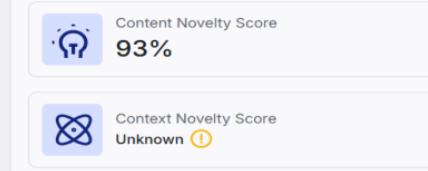

Employment Shopping -AI-Powered Mobile Hubs for Inclusive Workforce Integration

397

Abstract

Persistent unemployment disproportionately impacts marginalized populations like ex-offenders, rural workers, and individuals with disabilities. Existing AI-driven job platforms often exacerbate inequalities through access limitations and algorithmic bias. This study introduces Employment Shopping, a novel solution deploying mobile Employment Buses that integrate personalized, bias-mitigating AI job matching with essential on-the-ground human support. By leveraging unique public-private-civic collaborations and focusing on hyperlocalized needs, this hybrid model enhances accessibility and equity where purely digital platforms falter. We evaluate the model's feasibility, ethical considerations (including explainable AI and data privacy for vulnerable groups), and potential impact, aligning with UN Sustainable Development Goals for poverty reduction and equitable labor. Key contributions include a pioneering mobile AI-human hybrid framework for inclusion, a critical analysis of conventional AI job matching limitations, and actionable policy recommendations for truly equitable workforce integration.

Title

Decolonizing the Caste Narrative: A Historical and Socio-Cultural Analysis of the Role of Dalit Icons in Hinduism and Indian

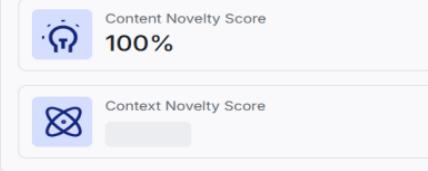

380

Abstract

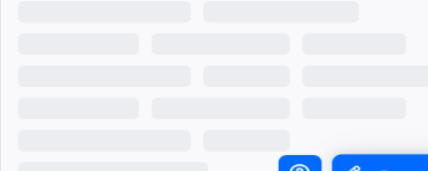

This paper critically examines the colonial construction of caste rigidity in Hindu society and highlights the role of Dalit icons such as Maharishi Valmiki, Ved Vyasa, and Emperor Ashoka in shaping Indian civilization. By analyzing historical texts, sociological evidence, and colonial administrative records, this study debunks the myth that caste discrimination is intrinsic to Hinduism. The paper presents ten key arguments refuting this misconception and introduces an engagement model using open-ended questions to counter the anti-Sanatani narrative. It also addresses misinterpretations of the Manusmriti, the historical rationale behind certain Dalit traditions, and presents policy recommendations for social unity.

The Positive Staircase Model: A Decentralized Framework for Employment and Entrepreneurship

361

Abstract

The Positive Staircase Model (PSM) introduces a six-phase trajectory to transform individuals into skilled professionals or innovative entrepreneurs amid global challenges like unemployment, skill mismatches, and economic disparity. Unlike linear training systems, PSM integrates rapid skill sprints, market-driven insights, and a self-evolving governance structure to empower learners worldwide. Leveraging decentralized collaboration and blockchain-backed credentials, this framework prioritizes adaptability, inclusivity, and measurable progress. This paper outlines PSM's architecture, its potential to reshape economic opportunity, and invites global communities to co-develop and test its impact.

Title

Narrative Quantum Entanglement in Geopolitical Systems (NQEGS): A Conceptual Framework for Understanding Global Narrative Influence

347

Abstract

This paper proposes Narrative Quantum Entanglement in Geopolitical Systems (NQEGS), a framework analogizing quantum entanglement to explore how narratives exert non-localized influence across geopolitical systems, shaping actors and public sentiment beyond traditional boundaries. Through interdisciplinary lenses—communication studies, political science, and systems thinking—it examines narrative reception, polarization, and institutional roles in contemporary geopolitics, emphasizing the analogy's metaphorical nature. The framework analyzes differential narrative reception, amplification of polarization through resonance, and institutional responses within media ecosystems. By applying NQEGS to current events, we offer a novel perspective on the complex dynamics of global narrative influence.

Title

Helix Kallol Protocol (HKP) : A Legally Enforceable System for Ethical Employment Using Proof-of-Ethics (PoE), Attrition Penalties, and AI Risk Prediction

384

Abstract

Labor exploitation persists through systemic opacity. Current enforcement tools—HR audits, anonymous reviews, or post-facto litigation—fail to ensure consistent employer accountability. The Helix Kallol Protocol (HKP) introduces a first-of-its-kind, legally enforceable Proof-of-Ethics (PoE) framework: a tamper-proof, audiovisual contract system anchored in blockchain, AI, and biometric verification. HKP replaces informal trust models with transparent, auditable mechanisms that ensure ethical labor practices on a scale. Core Components: 1. PoE Video Contracts—Legally admissible audiovisual agreements with biometric validation. 2. Attrition Penalty Units (APU)—Sector-adjusted, enforceable penalties for exploitative turnover. 3. Ethical Concord Nexus—A transnational ethics enforcement network for employer conduct. 4. AI Risk Shield—Predictive warnings for job seekers based on real-time ethics data. Initial focus: India's gig economy, with planned integration into the Code on Wages (2024). Early projections suggest a 30% reduction in forced attrition and 25% increase in wage compliance within 12 months.

Title

Silicon Alps – How Switzerland Redefined Power in a Digital World

353

Abstract

This paper envisions an alternate reality where Switzerland, not the United States, emerges as the epicenter of global technological innovation. Drawing on its deep-seated ethos of neutrality, robust privacy protections, and renowned precision engineering, Switzerland pioneers a transformative digital paradigm dubbed the "Silicon Alps." At the heart of this counterfactual lies the Helvetic Stack Theory, which meticulously embeds Swiss values into the very architecture of technology, cultivating what is termed a "techno-legal singularity"—where code seamlessly integrates with law by design (Pfiffner, 1993). Expanding on the foundational principles of open-source activism, the concept of Mozilla Warfare 2.0 evolves into a sophisticated geopolitical instrument that leverages decentralized systems to grant or revoke diplomatic legitimacy (Carr, 2012). Critiquing the perceived individualistic excesses and regulatory lacunae of the "California Ideology," this paper proposes Alpine Digital Realism as a grounded, value-driven alternative. The central question explored herein remains: Can a small, neutral state, leveraging its unique strengths, fundamentally redefine the contours of power in the digital age?

Title

Shakti as Sovereign Wisdom: Bharat's Enduring Governance Ethos from Devi to Modern Empowerment

387

Abstract

This concept paper unveils a novel framework: Bharat's socio-political evolution is intrinsically linked to the enduring reverence for Devi, the divine feminine. Tracing an unbroken lineage from Sindhu-Saraswati matriarchal motifs to contemporary policies like Beti Bachao, Beti Padhao, and the landmark 33% parliamentary reservation, this study demonstrates how Devi worship transcends mere spirituality. It argues that ancient night-centric rituals, the sacred geography of Devi-named cities, and vibrant regional festivals embody a foundational governance ethos rooted in feminine power ("Shakti-Swatantra"). This paper positions Devi not just as a deity but as the very blueprint for Bharat's civilizational strength and the ongoing empowerment of its women.

Title

Reverse Proxy Warfare: A Novel Strategy for Subverting State-Sponsored Terrorism

342

Abstract

Traditional counterterrorism strategies often focus on direct confrontation with terrorist organizations through military, financial, or intelligence means. This paper proposes a groundbreaking approach termed "Reverse Proxy Warfare," which subtly redirects a statesponsored proxy group against its own sponsor. By leveraging internal contradictions, amplifying rivalries, manipulating narratives, weaponizing public exposure, and employing emerging technologies like AI and deepfakes, this strategy undermines the proxy's legitimacy, fosters internal dissent, and transforms it into a liability for its patron. With a real-time feedback loop and preemptive potential, it targets not just established threats but also nascent proxysponsor alliances. This paper explores the theoretical framework and potential application to groups like Lashkar-e-Taiba (LeT) and their relationship with the Pakistani establishment, offering a paradigm shift in counterterrorism that could foster self-destruction within terrorist networks and reduce state reliance on asymmetric warfare.

Vedic Renaissance: Livelihoods and Ventures in Eco-Spiritual Homes

373

Abstract

The post-Mahakumbh period offers a rare chance to blend ancient architectural knowledge with modern economic prospects. Homes rooted in Vedic principles—designed for ecological balance and spiritual harmony—can spark job growth and entrepreneurial ventures. This paper examines their potential as a source of income, exploring skill-building, resource networks, business innovation, and platforms like Rozgar Vedic Dwar. By uniting traditional craftsmanship with green materials, this movement safeguards heritage while advancing eco-conscious housing.

Unpacking the USCIRF Report on India: A Critical Analysis of Western Narratives, Hindu Revivalism, and the Role of Academic Bias

354

Abstract

The recent designation of India as a "Country of Particular Concern" by the United States Commission on International Religious Freedom (USCIRF) can be interpreted within a framework of broader geopolitical dynamics and underlying ideological perspectives concerning the resurgence of Indic civilizational values under Prime Minister Narendra Modi's leadership (Arnason 2001). This paper critically analyzes the narratives underpinning the USCIRF report, examining its selective focus on secularism, human rights, and religious freedom while considering the concurrent cultural renaissance in India (Eisenstadt 2000). The study explores how initiatives such as the global promotion of Yoga, the development of spiritual infrastructure like the Kashi Vishwanath Corridor, the implementation of the National Education Policy (NEP) 2020 emphasizing Indian knowledge systems, and large-scale cultural events such as the Mahakumbh have contributed to a heightened Hindu consciousness and unity, potentially challenging established global narrative frameworks (Arnason and Davis 2001). Furthermore, this research evaluates the influence of certain academic institutions

Title

The Janvarta Framework: Reimagining Governance Through Ancient Wisdom and Technological Innovation

375

Abstract

The Janvarta Framework proposes a revolutionary governance paradigm rooted in the ethical/intellectual heritage of ancient Hindu kingdoms, notably the Gupta Empire, fused with modern technology and a meritocratic social order. It introduces unique mechanisms—Satya-Sabha (Aldriven truth councils), Lokvaad (People's Dialogue), and a reimagined Karma-Dharma Structure—to eliminate power monopolies, curb divisive rhetoric, and prioritize truth and adaptability. This paper presents a novel synthesis that transcends conventional models, offering a fluid, ethics-centric governance philosophy.

Title

Bio-Integrated Smart Villages 3.0: A Quantum-Enhanced, Space-Linked Paradigm for Sustainable Rural Futures

394

Abstract

This paper introduces Bio-Integrated Smart Villages 3.0 (BISV 3.0), a transformative rural development model that synergizes quantum-enhanced bio-AI, decentralized microbial energy hubs, sensory biomimetic networks, and blockchain-based Bio-NFT marketplaces with biomimicry and space-based innovations. Unlike conventional smart villages, BISV 3.0 embeds dynamic cultural-ecological feedback loops, AR-driven skill ecosystems, and space-linked climate resilience, fostering self-evolving, globally connected rural ecosystems. Simulations suggest 40-50% gains in agricultural productivity, 70% reductions in fossil fuel dependency, and novel green employment opportunities. The framework addresses scalability, inclusivity, ecological harmony, and global connectivity, offering a blueprint for sustainable rural futures.

Title

The Codex of Orchestrated Turbulence: A Neoteric Lexicon in Global Hegemonic Contestation

360

Abstract

This manuscript unveils the Codex of Orchestrated Turbulence, a geostrategic praxis wherein ascendant polities deliberately foment and curate disequilibrium within designated loci to perpetuate enduring positional supremacy. Eschewing the teleology of decisive triumph inherent in orthodox belligerence, this codex harnesses perennial disarray via calculated disengagements, interstitial proxies, syncretic economic subversion, and dissymmetric skirmishes. We posit that this paradigm, irreducible to Machiavellian statecraft, equipoise externus, or archetypal surrogate belligerence, constitutes a methodical stratagem of dominion projection in the third millennium. Through hermeneutic dissections of historical crucibles—such as the Soviet-Afghan entanglement, U.S. incursions in Mesopotamia, the Ukrainian imbroglio, and Libya's fragmentation—this study elucidates how sovereign entities wield entropy as a perennial fulcrum of sway. We probe its ramifications across martial doctrines, pecuniary belligerence, supranational stewardship, and axiological quandaries, proffering a reconceptualized scaffold for prognosticating prospective conflagrations while foregrounding the volition of autochthonous agents and the specter of aleatory repercussions.

Title

Contested Legacies: Analyzing the Impact of Controversial Legislations by the Indian National Congress on the Hindu Community

381

Abstract

This paper critically examines a series of legislations enacted or influenced by the Indian National Congress (INC), which have generated significant controversy and are perceived by critics as disproportionately affecting the Hindu community. Laws such as the Waqf Act (1995), the Places of Worship (Special Provisions) Act (1991), Article 30 of the Constitution, and others are analyzed for potential patterns of legislative asymmetry, selective application, and institutionalized differentiation impacting Hindus. Utilizing an interdisciplinary approach that incorporates legal interpretation, historical context, and sociopolitical critique, this research investigates the perceived long-term consequences of these laws. It argues for a national discourse on legislative equity and suggests a reassessment of policies that may, intentionally or unintentionally, marginalize sections of the country's majority population is warranted.
